

# Training Materials for Solar Domestic Hot Water Heating Systems

We've pioneered many training courses in renewable energy technologies for those working in plumbing and heating, and this – is one of our most popular.

The course is also a requirement if you're looking to achieve minimum technical competency (MTC) for solar installers, and the certificate is recognised as evidence of suitable training by those offering the Micro-generation Certification Scheme (MCS).

After the 2-day course, you'll be able to choose the most appropriate solar system for a building based on your client's needs and to install and maintain any of the common systems in the UK safely and efficiently.

The training course and manual cover:

- Introduction to solar heating.
- Solar collectors.
- Hot water storage and key installation issues.
- Preparing to install a solar water heating system.
- Fitting solar collectors.
- Plumbing layout and design of solar water heating systems.
- Control and power requirements.
- System commissioning and handover to client.

## What do you need?

To take the course you should have a minimum NVQ Level 2/3 qualification in plumbing or conventional heating engineering, or a demonstrable number of years of relevant experience and a Domestic Vented and Unvented Hot Water Storage Systems certificate.
