

Combination & High Efficiency Boiler Training

Combi and High Efficiency boilers are becoming increasingly complicated, and this course will help you understand their installation, service and maintenance better. It consists of a number of training modules covering:

- Installation of combi and high efficiency boilers.
- The different types available.
- The operational components.
- Operation of different types of boiler.
- Using a multimeter to identify working and defective components.
- Identifying and rectifying electrical faults on these boilers.

This is a 2½ day tutor-led training course in approved training centres, with modules taking you through the basics of making sure an installation meets all requirements and the different control and operating systems to fault finding on boilers, and includes a significant amount of practical work.

What do you need?

To take the course you'll need a recognised trade qualification and a minimum ACS CCN1 and CEN1 certificate. A working knowledge of central heating systems is essential.

Who's it for?

Experienced plumbing and heating installers wanting to expand their knowledge of Combi and High Efficiency boilers as part of their everyday work.
